

Responsive Cloud and IT Services for Law Firms

As with all San Antonio Law Firms, time is of the essence. This law firm did not want to encounter or experience any setbacks due to their IT environment. Luckily, they didn't have to when they decided a switch to the cloud would be the next steps in modernizing their practice. Better yet, they secured access to their (and therefore their clients') important data anywhere, anytime. We were happy to help them reach that goal.

BIGGEST CHALLENGES FACING LAW FIRMS

This law firm wanted to ensure around-the-clock access to important data to solidify the best experience for their clients. While they were introduced to the [benefits of the cloud](#) such as immediate access to new enhancements, flexible server space, and decreased upkeep cost, they were apprehensive due to perceived limitations such as inability to work like normal from other locations.

"...I cannot afford for my system to go down. If my computers go down, my office is shut down. Centre recognizes that and, in my experience, has very quickly responded to downtime."

- CEO of Law Firm

HELPING LAW FIRMS SUCCEED

It became clear that the cloud would propel this law firm forward and set them apart from the competition. Once activated, employees were able to access and print important documents for clients from anywhere at anytime without [threatening network security](#). By utilizing automatic software updates, 24x7 support, and cloud backups, employees could operate on a secure platform whilst enabling a more flexible workforce and therefore a more productive one.

Not only does this firm now enjoy a more versatile workforce, but their clients enjoy the increase in flexibility and around-the-clock access to data on a secure platform.

"I would recommend to other lawyers that they migrate their data to the cloud. It is so convenient to be able to access my files and my entire network from wherever I am, on any device that I happen to have available, whether it's my cell phone or an iPad or someone else's computer. I can access every bit of my data on the cloud and I can also print my data everywhere."
